### Views:

- ✓ India's economy has been growing more than 7% in the last four years and the rising trade deficit is not a sign of concern as India's economic growth is fueling higher domestic demand that outpaces export growth, leading to a widening trade deficit.
- ✓ India's merchandise trade is expected to rise as WTO had predicted a 2.6% growth world trade volume in 2024 after falling 1.2% in 2023. However, regional conflicts, geopolitical tensions and economic policy uncertainty pose substantial downside risks to global trade in CY 2024 but Indian exports, despite falling marginally in July'2024, have shown resilience amid the current uncertain economic scenario marred by global conflict.

- ✓ Merchandise imports remain higher than merchandise exports putting a downward pressure on Rupee. At the beginning of July'24 Rupee stood at ₹83.40/\$ and then continued falling to ₹83.74/\$ at the end of July'24. Rupee is expected to moderate in near time owing to lower overall trade deficit (including services) and higher capital inflows over the coming months after Indian government's bond inclusion in JPMorgan Government Bond Index-Emerging Markets (GBI-EM) on 28<sup>th</sup> June'2024.
